

SPS 3rd term seminar 2018-2019

Panel Data Analysis

Given by Raffaele Grotti – raffaele.grotti@eui.eu

Day	Time	Room	Topic
March 1	10:00-13:00	Seminar Room 2	Introduction and data structure
March 8	14:00-16:00	Seminar Room 2	How to handle and describe panel data
March 15	10:00-13:00	Seminar Room 2	Between- and Random-Effects models
March 19	10:00-13:00	Seminar Room 2	Fixed-Effects models and tests
April 5	10:00-13:00	Emeroteca	Assignment
April 8	10:00-13:00	Seminar Room 2	Distributed FE and FEIS (Fixed-Effects Individual Slope) models
April 15	10:00-13:00	Seminar Room 2	Dynamic models and summary

Description

The increasing availability of longitudinal data, namely data in which the same units (often individuals) are observed over time (usually every year), provides researchers with many opportunities. For example, the longitudinal character allows identifying the temporal order of events and life stages over the life-course, and allows controlling for unobserved confounders. These possibilities help social scientists in the difficult enterprise of estimating causal effects. At the same time, the complex structure of panel data requires advanced data management techniques, as well as specific methods for their analysis.

This seminar aims at providing the necessary skills for managing and analyzing panel data.

The seminar first introduces panel data, how to deal with their complex structure, and presents the main tools for descriptive analysis.

Then, we will cover the main estimators, including Random- and Fixed-effects models; we will discuss their pros and cons; and how to choose the more suitable estimator for our scope.

Next, students are asked to do an intermediate assignment in which they have to work on data management and perform a set of analysis using the discussed estimators. We will then discuss the assignment in the fourth class.

Finally, we will discuss more advanced estimators.

The seminar is practical and we will use Stata with simulated and real-life data.

The examination consists of the take home exam, using your own (preferred) or

assigned data. The exam may build on the intermediate assignment. The exam is due on 2 May.

Students who intend to work with panel data for their dissertation are invited to use their own data for the assignment and the exam.
