User Satisfaction Survey Report

2014

David Scott

July 2014

Introduction

This report summarises the outcome of the user satisfaction survey launched by the ICT Service in March 2014. The survey is one means through which the ICT Service can give a voice to its users. It is a systematic way of identifying what is working and what needs to be improved from the users' perspective. This survey was undertaken for the following purposes, all of which informed the content of the survey:

- To document where users are satisfied, as well as where they are dissatisfied.
- To find out what improvements are important to users.
- To use this data to establish priority areas for improvement, so that all users of ICT services at the EUI can continue their daily work.

The ultimate goal is to provide an excellent user IT experience that supports the learning, research and business needs of the EUI community.

The survey results on the following pages provide a basis for determining how the ICT Service can focus its efforts to improve the quality of the user experience at the EUI.

Survey Methodology

The survey form was mainly based on a multiple-choice questionnaire. There was also a free-text field for additional comments.

Survey Population

- The survey solicited feedback from three user communities: faculty, students and administrators. It was addressed to more than 1300 users.
- The survey was carried out between 24 March and 14 April 2014.
- The anonymity of the users was maintained.
- The survey was based on an online form with a total of 38 questions.
- By the end 312 users had seen the form, 210 started the survey and 199 had fully completed the survey.

Selection Criteria - All Communities

- Must have an email address.

Selection Criteria – Administrative

- ICT Service staff were excluded.

Summary

The following report summarises the results of the multiple-choice questions for 2014 by comparing them with those of year 2012 (2013 not being conducted due to an ad interim management).

Participation in the survey was slightly lower this year compared with the previous survey conducted in 2012¹. In 2012 the figures were: *completed*: 211, *started*: 214.

The results of the survey show that overall user satisfaction with the facilities and services provided by the ICT Service stands at nearly 80% with almost no real change since the last survey (77.3% in 2013 against 78.3% in 2012). Although there is still room to improve this rating, the maintenance of this level was a positive sign, in light of the ICT Service being challenged by the expansion of the campus to include Villa Salviati and Villa Paola, the move of more than 200 users/working places within the campus, and the introduction of the Helpdesk.

Judging from the positive comments that have been received, users are generally happy with the support for off-hours and for general services (namely, internet access, download speed and emailing).

Compared with the previous survey, slightly more people answered that they experienced high availability of ICT services (67 = 33.7% of respondents in 2014 compared with 63 = 29.9% in 2012).

Wi-Fi coverage and reliability across the whole of the EUI is a major area of concern.

User support is generally well regarded and the IT User Support offices have received favourable reviews overall, though there has been some criticism about the use of the Helpdesk. This service is being evaluated in a separate survey and report which is jointly commissioned by the ICT Service, Communications Service and the Real Estate and Facilities Service.

Regarding security, the majority of respondents prefer to see an increase in internet security measures implemented at the EUI, with an increase from 72 = 34.1% in 2012 to 86 = 43.2% in 2014.

The ICT Service has identified key areas of concern and intends to take the following measures in response to the issues raised by the survey feedback:

Wi-Fi

- Continue the Wi-Fi optimisation project, which is currently in progress, to extend the coverage of the service (to include more outdoor areas such as gardens and loggias as well as additional academic/research indoor areas of the EUI);
- Set up a specific User Group in the coming academic year to address any problems related to Wi-Fi for Mac/iOS;

¹ <http://www.eui.eu/Documents/ServicesAdmin/ComputingService/CSSurvey2012.pdf>

General

- Finalise Windows 8 and Linux (Ubuntu) configuration instructions (available in the coming academic year);
- Agree, among the ICT Service, the Library and the Researchers' Reps, a way to provide automatic log-off or locked-yet-inactive sessions;
- Investigate the possibility of providing PhD researchers with MS Office for their laptops and tablets;
- Look into the possibility of organising quick IT introductory sessions on the most common services provided (network shares, VPN, etc.).

Additionally, requests for more cleaning and power plugs in Computer Rooms and Commons, comments related to printing and scanning facilities and as well as to the Helpdesk have been passed to the Real Estate and Facilities Service.

I would like to take the opportunity to thank the members of the EUI for taking the time to respond to the survey. Your comments and feedback are invaluable and will help us ensure that we can anticipate and meet the needs of the users of ICT services.
